

部署步骤

1. 安装依赖

1.1 安装hertz相关依赖

详见 <https://www.cloudwego.io/zh/docs/hertz/getting-started/>

1.2 安装vue相关依赖

pkg/IDL-Management/vue-front里是前端代码，需要安装vue相关依赖

详见 <https://www.cnblogs.com/mjtabu/p/14324270.html>

1.3 安装go相关依赖c

略

2. 启动服务

2.1 shell脚本启动

```
sudo apt install gnome-terminal //支持启动多个终端
sudo apt-get install gnome-session
sh run.sh
```

2.2 手动启动

```
//启动hertz-back
cd pkg/IDL-Management/hertz-back
go build
./hertz-back
//启动vue-front
cd pkg/IDL-Management/vue-front
npm run dev
//启动gateway
go build
./cloudwego-api-gateway
```

3. 补充说明

3.1 Vue前端部署

Recommended IDE Setup

[VSCode](#) + [Volar](#) (and disable Vetur) + [TypeScript Vue Plugin \(Volar\)](#).

Customize configuration

See [Vite Configuration Reference](#).

Project Setup

```
npm install
```

Compile and Hot-Reload for Development

```
npm run dev
```

Compile and Minify for Production

```
npm run build
```

Lint with [ESLint](#)

```
npm run lint
```
